MEET US AT NORDIC LIFE SCIENCE DAYS 12-14 SEPTEMBER 2017

At Nordic Life Science Days in Malmø Medicon Valley Alliance, Medeon and Biopeople will share an exhibition stand, where you are most welcome to visit us. We plan to host a reception at the stand and maybe other arrangements.

Please feel free to join - you do not have to be attending NLS Days - Participation is free of charge but please register here

This is the first time Nordic Life Science days hosted by Malmø and we hope to see many from the Danish Life Science Cluster at the conference.

Biopeople members benefit from a 15% discount on all registration rates including Academics and Small company tickets. Please use the discount code 4RZ6E64 upon registration when requested before final validation and payment.

Calendar information here

Biopeople will be available to talk about projects and upcoming events among which are Boost4Health, Biomarker AGORA, International Conference on Perspectives in Precision medicine etc.

Biopeople's Boost4Health Partner from Catalonia and maybe representatives from the other partner regions in the project will attend the Nordic Life Science Days with a delegation of life science companies eager to meet, network and possibly match with companies and researchers from the Nordic Region. We will be able to publish a list of the attending Catalonian companies in August.

The program at the Nordic Life Science Days will include presentations by key note speakers and companies. The key-note speakers are some of the top thinkers and trend-makers in pharma, biotech, medtech, digital health, investment & funding, regulatory.

The company presentations are organised into tracks that interest specific audiences and fields, for example: pharma and biotechnology in R&D, therapeutics or diagnostics, academic and startup innovators, services providers.

Furthermore, Super Sessions will address hot topics in science, business development and market strategies.

We look forward to seeing you in September. for business, international exposure of companies, product marketing, networking and knowledge exchange.

We look forward to seeing you in September.

FRENCH CONNECTIONS IN THE MAERSK TOWER IN SEPTEMBER

Just before Nordic Life Science Days starts:
Personalized Medicine & Biomarkers: "Health, Demographic change & Wellbeing"
challenge 1 in Horizon H2020.

In view of the next H2020 Societal challenge 1 calls, the aim of this brokerage event is to allow upstream meetings between French and Nordic researchers interested in personalised medicine and biomarkers.

Target audience:

Universities, research institutions, hospitals, large companies, SMEs, start-up and patients' associations from France and the Nordic countries are highly encouraged to participate.

The event is open to researchers in the fields of medicine, computer science, human and social sciences (law, health economics, sociology, etc.).

Participants from other countries are also welcome to join notably EU13!¹

INTERNATIONAL CONFERENCE ON PERSPECTIVES IN PRECISION MEDICINE IN FEBRUARY 2018

Together with the Danish Agency for Science and Higher Education and Enterprise Europe Network, Biopeople will host a conference targeted at national and international small and medium sized enterprises

Research and commercial development in the cross field between public health, health records, biobanks, biomarkers, information and communication technologies, user perspectives and the established fields of the pharmaceutical industry is an emerging growth area facing challenges.

Denmark has a unique position in addressing these challenges:

Denmark has a national strategy on personalised medicine based on a yearlong systematic collection of data and knowledge about the Danish population's diseases and treatment. Denmark is in a unique position with an opportunity to make a difference for the individual citizen. Combined with the global development of personalised medicine, new technologies and increased knowledge about the importance of genes, the Danish health care system has unique opportunities to develop the potential of personalised medicine.

Denmark is a highly developed ICT nation and as such has a strong environment for developing solutions, which address health related needs. Almost every other Dane uses the internet for health related information. The Danish digital ecosystem has a strong technological foundation for system development integrating hardware and software and it comprises one of the most competitive and advanced telecommunications infrastructure and mobile markets. This in particular will be central for the development of new smart products for applications in health care.

User involvement in health care has become an important focus area in Denmark in relation to safety issues, self-care, partnerships in medical development and others. Patients are already involved in many ways, however, both ICT and pharmaceutical development could benefit even more from collaborating with patients.

National and international delegates from companies, research institutions and the health sector will meet, share knowledge, form new projects, identify project funding and learn about precision medicine seen from new and exciting perspectives.

The conference will introduce the new cross-disciplinary research field and bring together key opinion leaders in the three converging disciplines: Pharmaceutical development, ICT and user involvement in health care. This will happen by a combining key notes, panel discussions, thematic round tables and relevant matchmaking of new partnerships.

BOOST4HEALTH TO MATERIALISE IN THE FALL

Biopeople plans to arrange information meetings in Copenhagen, Aalborg and Aarhus

The interregional EU project Boost4Health will materialise in the fall of 2017, where Biopeople plan to arrange information meetings in Copenhagen, Aalborg and Aarhus. The project runs until July 2019 and the target group is Small and Medium Sized Danish companies, who would benefit from small financial incentives to establish contact and potential partnerships with SMEs in the partner regions, which are German, French, Dutch, Belgian and UK regions as well as Catalonia in Spain.

Biopeople is the Danish partner, which implies financial administration and other services, which might be helpful for the Danish companies.

When the project is fully implemented, the Boost4Health program will offer access to a database of potential European partners and service providers, matchmaking arrangements and potential discount fees at selected European conferences, including the Nordic Life Science Days in Malmø in September 2017 and Bio-Europe in Copenhagen in 2018.

In Denmark, we will also provide pitch-training, which may range from individual sessions to sparring sessions with panels of experts. Furthermore, we will facilitate coaching sessions with business coaches from for instance Vaeksthus Copenhagen.

Please contact us with questions and requests regarding the program

FUTURE WEEK DENMARK IN WEEK 48

Danish clusters and network will all be part of "Future Week Denmark". In this week they will host events all over Denmark showing the way to the future innovative Denmark.

FutureWeek Denmark will consist of cross disciplinary events arranged by the Danish clusters and networks. Together they cover the majority of the Danish business environment - geographically, technologically and business wise.

The Danish clusters and networks operate within each their field and serve as gathering points that provide companies access to knowledge and collaboration with other companies, knowledge institutions and public organisations.
